Was this repository ever public?

18rajeshkumarg/indicasoftware | Github | Generated 13 Nov 2026, 10:06 UTC

ASSESSMENT RESULT

Public exposure confirmed

A matching public observation exists. A public-to-private change was not established.

Automated acceptance decision: Reject

CURRENT ACCESS	PAST EXPOSURE	HEURISTIC
Public	**Confirmed**	**99%**
At report time	Positive evidence only	Not a measured probability

What this means

Positive evidence shows public exposure, but the available record does not establish a public-to-private transition. The current visibility is public.

Audit review: **Audit check not requested**. Public-to-private transition: **Unknown**.

Key findings

Repository currently public. The provider reported that the repository was public at the time of this check. Date: 13 Nov 2026, 10:06 UTC. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Historical public record. A historical public record was associated with this repository. Date: 01 Nov 2026, 16:11 UTC. Event ID: 26020059611. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Historical public record. A historical public record was associated with this repository. Date: 01 Nov 2026, 16:08 UTC. Event ID: 26019842682. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Recommended next step

Do not accept automatically under the current private-only policy. Verify the cited provider record and ask the repository owner to explain the public period and code rights.

Evidence behind the result

Every recorded finding is listed below. 'Confirmed' refers to the tool's identity-matching rules; imported records still need independent source verification.

1. Repository currently public [CONFIRMED]

The provider reported that the repository was public at the time of this check. Date: 13 Nov 2026, 10:06 UTC. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Source: Github Anonymous API

2. Historical public record [CONFIRMED]

A historical public record was associated with this repository. Date: 01 Nov 2026, 16:11 UTC. Event ID: 26020059611. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Source: Github Recent Events

3. Commit found in public history [PUBLIC CODE LINK]

A sampled commit was also found in public history. Shared history alone does not prove that this exact repository was public. Date: 01 Nov 2026, 16:11 UTC. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware. Example commit: 660f4462bb07....

Source: Github Recent Events

4. Historical public record [CONFIRMED]

A historical public record was associated with this repository. Date: 01 Nov 2026, 16:08 UTC. Event ID: 26019842682. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Source: Github Recent Events

5. Commit found in public history [PUBLIC CODE LINK]

A sampled commit was also found in public history. Shared history alone does not prove that this exact repository was public. Date: 01 Nov 2026, 16:08 UTC. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware. Example commit: a3a34c2a3b64....

Source: Github Recent Events

6. Historical public record [CONFIRMED]

A historical public record was associated with this repository. Date: 01 Nov 2026, 15:44 UTC. Event ID: 25984627267. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware.

Source: Github Recent Events

7. Commit found in public history [PUBLIC CODE LINK]

A sampled commit was also found in public history. Shared history alone does not prove that this exact repository was public. Date: 01 Nov 2026, 15:44 UTC. Repository ID: 1412747107. Matched repository: 18rajeshkumarg/indicasoftware. Example commit: adbdbf1beda0....

Checks and coverage

A completed check covers only the source and time window shown. An unavailable or negative check never proves a private lifetime.

CHECK	RESULT	DETAIL
Github Repository Metadata	Read successfully	-
Github Anonymous Visibility	Read successfully	-
Github Recent Events	Read within available window	Records: 20

How the heuristic score was calculated

99% is an assumption-based evidence index, not a statistical probability. Audit events are excluded from the score. Positive signals add points within group caps; missing signals add no points.

SIGNAL	STATUS	WEIGHT	ADDED
Current public visibility Current public access strongly indicates exposure; current private access says nothing about the past.	Found	95	+95
Historical public record	Found	85	+0
Exact public commit match	Found	75	+0
Public parent repository	Not seen	60	+0
Supplied reference code match	Unavailable	35	+0
Fork relationship	Not seen	8	+0
Stars	Not seen	2	+0
Subscribers	Not seen	1	+0
Forks	Not seen	3	+0
Links or additional remotes	Not seen	3	+0
Deleted license history	Not seen	6	+0
Open-source license file An open-source license artifact may cover third-party material in a private project.	Found	4	+4
Deleted README history	Not seen	2	+0
Large codebase, short history	Not seen	4	+0
Contributor metadata (context only)	Found	0	+0

SIGNAL	STATUS	WEIGHT	ADDED
Clone history (not collected)	Unavailable	0	+0

Group points: Public Trace 95, Relationship 0, Engagement 0, Documentation 4, History 0, Context 0. Final displayed score: **99%**.

Coverage limits

- No search or audit-log window can prove a repository was always private.
- Git dates, authors, remotes and local evidence files can be edited or fabricated.
- Deleted repositories, detached forks, renames, transfers and rewritten history can hide origins.
- A shared commit/file can be a dependency or template; it does not establish ownership or copying direction.
- Imported records and reference repositories require independent verification of their source.
- Recent GitHub events are a bounded feed, not a lifetime visibility history.
- Weights are assumptions without empirical calibration; this percentage is an exposure index, not a statistical probability.
- 0% means no weighted indicators observed, not a 0% chance of past publication. Missing signals never clear a repository.
- Public-origin code, a public ancestor, and publication of this exact repository are different claims.
- No global mirror/web search is performed; public traces depend on existing evidence and optional commit search.
- Local history and attribution may be incomplete or edited; absence of findings cannot verify privacy.

This client report summarizes the captured observations. The companion provenance.json retains the complete structured record, including technical values and evidence-source hashes.
